## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-18 are rejected under 35 U.S.C. 102(e) as being anticipated by

Kruglikov et al. U.S. Patent No. 6,505,215.

Regarding claims 1-18, Kruglikov discloses a method for authenticating a wireless device with a fixed station, the method receiving a first authentication request from the wireless device when the wireless device detects that the fixed station is in close proximity, the first authentication request including a first unique identifier for identifying the wireless device and a second unique identifier for identifying the fixed station; receiving a second authentication request from the fixed station when the fixed station detects that the wireless device is in close proximity, the second authentication request including the second unique identifier for identifying the fixed station; and authenticating the wireless device with the fixed station based on whether the second unique identifier received in the first authentication request matches the second unique identifier received in the second authentication request, and also based on whether the first unique identifier received in the first authentication request is associated in an
